

Serenus Information Systems – Unleashing the latent potential of Technology

Our Methodology

We strongly believe that, it is our methodology that helps us exceed expectations for quality, delivery time and cost. Our methodology is based on Scrum, a proven Agile Software Development Process. For better interests of our customers, we have slightly modified the process to suite our customer needs.

"Happy Customer", being our only motto, we adopt ourselves to our customer needs, ensuring a high level of quality in terms of commitment and transparency. We provide our customers with a detailed report about the project completion status, risk management and budget report at different levels of Software Development Cycle which internally helps them organize their schedules and plans.
